

## Safety in the supply chain is our top priority. Do You know the risk in transport?

As ENFIT, International Association -Supply Chain Safety , we have set ourselves the goal of informing the members of the supply chain about risks of the supply chain and working together to develop and implement risk reduction solutions.

### The main expectations of the stakeholders are:

- Responsibility, reliability and trust
- Defined standards that all stakeholders know
- Fair business connections
- Transport containers that are regularly tested for food suitability according to DIN 10 502-1
- FCM food contact material for food
- Global identification of transport containers (ENFIT GID, block chain technology)
- Certified and Qualified Cleaning (HQF-High Quality Food Certification)
- Cleaning and disinfection according to defined processes (ENFIT Cleaning procedures)
- Validated and verified processes
- Quality inspection and controll
- Transparency across the entire supply chain

These and other questions are content of the European Working Group and documented in the european and international Guideline - Food Safty in the supply Chain.
